

About Seminar

NCS-2019 is planned to bring together researchers from academia, industry and research institutions for exchange of knowledge and ideas about the role of surfactants in general and industrial applications in particular.

Surfactants are among the most versatile materials for application in diverse areas, such as detergents, soil decontamination agents, food additives, drug delivery vehicles, solar energy harvesting materials etc. The conference will include invited talks of eminent researchers and product developers. The deliberations in the various areas will be helpful for better understanding of the delegates from different spectrum associated with development as well as application of surfactants.

Conference Topics

- Reactive Surfactants
- Hydrotropes
- Surfactants in Laundry Applications
- Surfactants in Cosmetics
- Bio-surfactants
- Gemini and Hybrid Surfactants
- Molecular Modeling in Surfactants
- Regulatory Challenges in Surfactant Industries
- Analytical Techniques in Surfactant Characterization
- Colloid and Colloidal Stability

About Society for Industrial Chemistry

Society for Industrial Chemistry was established around 5 years back. It has organized about 8-9 seminars in many areas, such as Characterisation of materials, Performance chemicals in paints, Surfactants etc. It has around 200 life members. The society has the goal of increasing the base to encompass more personnel from industries, academics and research institutions for betterment of both via various interaction forums like the conferences.
